

# CHORUS NEW ZEALAND

## Building connections

As reliance on technology expands, the demand for reliable, available and robust networks will only increase.

At Visionstream, we work with carriers and vendors to provide innovative, effective and efficient solutions to ensure the supply of available networks meet voice and data demand through network optimisation, efficient build and rollout and ongoing maintenance of these critical assets.

## New Zealand's Ultra-Fast Broadband

Visionstream has a significant partnership with Chorus New Zealand to undertake their network operations and maintenance work for Auckland and Northland, in addition to managing the roll out of New Zealand's Ultra-Fast Broadband (UFB) program.

The project includes construction and maintenance of both new and existing copper and fibre optic access networks, as well as onsite connection for Chorus customers incorporating standard telephone, broadband and cable services.

Visionstream has strong experience in delivering fibre optic technology and is currently working within the designated coverage area in Auckland, where 70 per cent of the UFB technology will be installed.

The UFB program is an eight-year project that covers all parts of New Zealand, of which Visionstream is privileged to undertake network operations and maintenance work for various regions in Auckland and Northland.

## Highlights

- UFB is changing the way New Zealanders work, live and play.
- Year 1 of the project has been successfully completed providing UFB to over 28,000 customers.
- Year 2 of the UFB rollout consists of 347 cabinets spread over 17 areas and servicing 48,000 customers.

We partner with you to deliver value, driving network efficiency and providing end-to-end solutions from design to build, integration and ongoing maintenance of the asset.

## End-to-end solutions

Visionstream works with all technology vendors and is proud to be independent and able to recommend the best available solution for specific customer needs.

We have built a reputation for delivering critical networks, and seamlessly integrating new network elements into complex existing networks. Our in-house engineering expertise ensures the solution is custom designed for your network, using the most innovative technologies available to optimise the lifecycle of your asset.

Visionstream's carrier and ISP expertise covers all methods and components of construction including: key design, installation and commissioning, project management, as well as operations and maintenance, and upgrades and expansions for, fibre networks, fixed access networks, facility works, mobile and radio.

With more than 20 years' experience in the networks market, an award winning safety record and expertly skilled team, Visionstream brings together a diverse range of technologies and data from multiple sources without compromising integrity and reliability, to deliver whole-of-life solutions.
